MOECK & MOECK Expands Veterinary Temperature Management Portfolio: New VET 2.5 Convective Warming Mat Now Available

With the VET 2.5, MOECK & MOECK introduces a new reusable convective warming mat that reliably warms veterinary patients not only from below, but also optionally from the sides and above.

The new warming mat has been specifically designed for safe patient temperature management of small animals, such as rabbits, but is also suitable for other veterinary patients of a corresponding size. The VET 2.5 complements MOECK & MOECK's existing portfolio in medical temperature management and is available now.

Unlike conventional warming mats, the VET 2.5 features side flaps that can be fastened into a roll using snap buttons. This design ensures even heat distribution across all relevant contact points and, optionally, on the sides and above.

"With the VET 2.5, we are responding to the clinical need for a flexible, pressure-relieving, and at the same time easy-to-use solution for patient warming," says Andreas Martin, contact person at MOECK & MOECK. "The product combines the proven materials of our warming mats with the functionality of a warming blanket."

The VET 2.5 is washable, reusable, and can be connected via a single hose to almost all warm air devices on the market. Its design supports stable temperature management and additionally contributes to pressure relief for patients.

As with all company products, the VET 2.5 is sewn and manufactured in Hamburg.

Product Features at a Glance:

- Reusable convective warming mat for patient warming from below, the sides, and above
- Side flaps with snap button strip
- Heat distribution at all contact points
- Pressure-relieving
- Unobstructed surgical field
- Single hose connection
- Compatible with almost all warm air devices
- Washable and durable

Technical Specifications:

- Size: 57 × 72 cm
- Weight: approx. 280 g
